Ambulatory Surgical Center Fee Schedule
An Ambulatory Surgical Center (ASC), for Medicare purposes, is a distinct entity that operates exclusively for the purpose of furnishing outpatient surgical services to patients. To be eligible for Medicare payment, ASCs must be certified as meeting the requirements for an ASC and must enter into an agreement with the Centers for Medicare & Medicaid Services (CMS). An ASC can be either:

- Independent (not part of a provider of services or any other facility); or
- Operated by a hospital (under the common ownership, licensure, or control of a hospital). An ASC operated by a hospital must:
  - Be a separately identifiable entity that is physically, administratively, and financially independent and distinct from other operations of the hospital, with costs for the ASC treated as a non-reimbursable cost center on the hospital’s cost report;
  - Agree to the same assignment, coverage, and payment rules applied to independent ASCs; and
  - Comply with the conditions for coverage for ASCs.

**AMBULATORY SURGICAL CENTER PAYMENT**

Effective January 1, 2008, in accordance with the Medicare Prescription Drug, Improvement, and Modernization Act (MMA) of 2003, CMS implemented a revised ASC payment system using the Outpatient Prospective Payment System (OPPS) relative payment weights as a guide. The policies for the revised ASC payment system were made in the ASC final rule (CMS-1517-F), which was published in the Federal Register on August 2, 2007. The ASC final rule greatly expanded the types of procedures eligible for payment in the ASC setting and excluded from eligibility only those procedures that pose a significant safety risk to beneficiaries or are expected to require active medical monitoring at midnight when furnished in an ASC. The rule also provided a four-year transition to the fully implemented revised ASC payment rates. Beginning with the November 2007 OPPS/ASC final rule with comment period (CMS-1392-FC), the annual update OPPS/ASC final rule with comment period provides the ASC payment rates and lists of surgical procedures and services that qualify for separate payment under the revised ASC payment system.

Medicare makes a single payment to ASCs for covered surgical procedures, which includes ASC facility services that are furnished in connection with the covered procedure. Examples of covered ASC facility services that are paid through the payment for covered surgical procedures include the following:

- Nursing services, services furnished by technical personnel, and other related services;
- Patient use of ASC facilities;
- Drugs and biologicals for which separate payment is not made under the OPPS, surgical dressings, supplies, splints, casts, appliances, and equipment;
- Administrative, recordkeeping, and housekeeping items and services;
- Blood, blood plasma, and platelets, with the exception of those to which the blood deductible applies;
- Materials for anesthesia;
- Intraocular lenses;
- Implantable devices, with the exception of those devices with pass-through status under the OPPS; and
- Radiology services for which payment is packaged under the OPPS.

Medicare also pays ASCs separately for covered ancillary services that are integral to a covered surgical procedure billed by the ASC, specifically certain services that are furnished immediately before, during, or immediately after the covered surgical procedure. Covered ancillary services include:

- Drugs and biologicals that are separately paid under the OPPS;
- Radiology services that are separately paid under the OPPS;
- Brachytherapy sources;
- Implantable devices with OPPS pass-through status; and
- Corneal tissue acquisition.
The covered ancillary services that qualify for payment under the revised ASC payment system in CY 2010 are displayed in Addendum BB to the November 2009 OPPS/ASC final rule with comment period. Certain services may be furnished in ASCs and billed by the appropriate certified provider or supplier. The chart above depicts examples of payment and billing for items or services that are not included in ASC payments for covered surgical procedures or covered ancillary services. The beneficiary coinsurance for ASC covered surgical procedures and covered ancillary services is 20 percent of the Medicare ASC payment after the yearly Part B deductible has been met, with the exception of a beneficiary coinsurance of 25 percent of the ASC payment for screening colonoscopies and screening flexible sigmoidoscopies.

**HOW PAYMENT AMOUNTS ARE DETERMINED**

As mandated by the MMA, the revised ASC payment system was implemented to be budget neutral for Medicare. In the annual updates to the ASC payment system, CMS sets relative payment weights equal to OPPS relative payment weights for the same services and then scales the ASC weights in order to maintain budget neutrality from year to year. For CY 2010, the ASC relative payment weights were scaled to eliminate any difference in the total payment weight between CY 2009 and CY 2010.

CY 2010 is the third in the four-year transition period to full implementation of the revised ASC payment rates. All procedures on the ASC list of covered surgical procedures for CY 2007 are subject to the transitional payment methodology. The payment rates during the transition period are a blend of the CY 2007 rate and the rate for the pertinent CY. The blended transitional rates are described below:

- **CY 2008**—Payment rates consist of 25 percent of the CY 2008 revised ASC rate plus 75 percent of the CY 2007 ASC rate;
- **CY 2009**—Payment rates consist of 50 percent of the CY 2009 revised ASC rate plus 50 percent of the CY 2007 ASC rate;
- **CY 2010**—Payment rates consist of 75 percent of the CY 2010 revised ASC rate plus 25 percent of the CY 2007 ASC rate; and
- **CY 2011 and all future years**—Payment rates will be calculated according to policies of the revised payment system.

### Examples of Items and Services Not Included in ASC Payments for Covered Surgical Procedures or Covered Ancillary Services

<table>
<thead>
<tr>
<th>Items or Services Not Included</th>

The covered ancillary services that qualify for payment under the revised ASC payment system in CY 2010 are displayed in Addendum BB to the November 2009 OPPS/ASC final rule with comment period.
Thus, the relative payment weights for CY 2010 were scaled according to the following method—holding ASC utilization and mix of services constant from CY 2008 (the most recent full year of claims data available), CMS compared the total payment weight using the CY 2009 ASC relative payment weights under the 50/50 blend to the total payment weight using the applicable CY 2010 OPPS relative payment weights for covered ASC surgical procedures and separately payable ancillary services under the 25/75 blend for CY 2010 to take into account the changes in the relative payment weights between CY 2009 and CY 2010. The ratio of the CY 2009 to CY 2010 total payment weight is the weight scaler, which is applied to the CY 2010 relative payment weights in order to maintain budget neutrality.

The ASC conversion factor is annually adjusted for budget neutrality by removing the effects of changes in wage index values for the upcoming year as compared to values for the current year. In accordance with the MMA, beginning with CY 2010 the ASC conversion factor may be updated annually by the Consumer Price Index for All Urban Consumers.

ASCs are paid the lesser of the actual charge or the ASC payment rate for each procedure or service. The standard payment rate for ASC covered surgical procedures is calculated as the product of the ASC conversion factor and the ASC relative payment weight for each separately payable procedure or service. There are alternate methodologies for establishing payments for covered ancillary radiology services, office-based procedures, drugs and biologicals, and device-intensive procedures. Payments for covered surgical procedures and certain covered ancillary services are geographically adjusted using the pre-floor and pre-reclassified hospital wage index values, with a labor-related factor of 50 percent. Payments are also adjusted when multiple surgical procedures are furnished in the same encounter or when procedures are discontinued prior to their initiation or the administration of anesthesia.

The alternate methodologies for establishing payment rates for some surgical procedures and ancillary services are briefly described below:

- Office-based procedures are procedures that are furnished in physicians’ offices at least 50 percent of the time and that CMS classifies as “office-based.” ASC payment is made at the lower of the ASC rate or the nonfacility practice expense (PE) relative value unit (RVU) amount of the Medicare Physician Fee Schedule (MPFS) for the relevant year.

- Device-intensive procedures are ASC covered surgical procedures that, under the OPPS, are assigned to ambulatory payment classifications (APC) for which the estimated device offset percentage is greater than 50 percent of the APC’s median cost. Device-intensive procedures are paid:
  - A device-related portion of the procedure, which is the same amount paid for the device under the OPPS; and
  - A service portion, which is calculated according to the standard or transitional ratesetting methodology, as appropriate.

- Only ASCs may receive separate Medicare payment for the facility costs of covered ancillary radiology services. Separately payable radiology services are paid the lower of the ASC rate or the technical component or nonfacility PE RVU (whichever applies) payment amount of the MPFS for the same year.

- Separately payable drugs and biologicals are those for which separate payment is made under the OPPS. ASCs are paid the same amount that is paid under the OPPS.

- Brachytherapy sources are paid at the same amount as the OPPS rates if a prospective OPPS rate is available. Otherwise, ASCs are paid at contractor-priced rates. These payments are not adjusted for geographic wage differences.

Under the revised ASC payment system, ASCs continue to submit claims on the CMS-1500 claim form.
